EDUCATION

Wilfrid Laurier University

Sep. 2023 – Aug. 2027

Honours Bachelor of Science in Computer Science, Co-op

Waterloo, ON

- Concentration in Big Data Systems, Minor in Business Administration

EXPERIENCE

Software Engineer

May 2025 – Present

DataFloat

Waterloo, ON

- Built and shipped a production financial intelligence platform with the founding team using Next.js, React, TypeScript, Prisma, and PostgreSQL, taking it from prototype to a live pilot deployment on real financial data
- Engineered an automated pipeline that syncs third-party accounting and CRM data into isolated per-tenant Postgres schemas, handling OAuth 2.0 and layering reversible transformations that leave source data untouched
- Designed a multi-agent, Claude-powered system that lets users run data operations through natural language, with configurable retry and timeout handling across agents so transient model failures stay invisible to the user
- Implemented multi-tenant organizations and projects with role-based access control, email verification, password reset, and invite flows on BetterAuth, with server-side route protection and automated test coverage platform-wide
- Conducted **100+** discovery interviews and analyzed secondary data from industry databases to validate product-market fit, using SWOT analysis and the Lean methodology to guide strategic pivots

Executive Vice President & Project Manager

Sep. 2024 – Apr. 2026

Laurier Cybersecurity Club (LCC)

Waterloo, ON

- Plan and lead club events collaboratively with the executive team, handling logistics, outreach, and follow-up using Notion and Google Workspace, contributing to a **60%** increase in average student turnout
- Direct internal operations by coordinating a cross-functional team of **3+** Vice Presidents, establishing task workflows and progress tracking systems to ensure **100%** on-time delivery of all club initiatives each term
- Oversee technical development of the club's online projects to facilitate collaboration, using Git and GitHub
- Coordinated and hosted a cybersecurity panel and Capture-the-Flag contest with **40+** attendees by planning all logistics including food, event space booking, online platform setup, and guest speaker outreach

Software Engineer Intern

Sep. 2025 – Dec. 2025

StartUp Lab Laurier Incubator

Waterloo, ON

- Delivered **three** production full-stack platforms end-to-end using TypeScript, Next.js, Supabase, Prisma, and TailwindCSS, owning system architecture, implementation, and deployment to Vercel for real users
- Partnered with non-technical clients to translate ambiguous requirements into scalable software solutions, automating previously manual workflows and driving adoption across multiple internal programs
- Built and scaled a Winternship job-matching platform supporting 111 positions (**+39% YoY**), 71 roles (**+48%**), **83+** students, and 38 employers (**+65%**), directly enabling program growth and increased participation
- Implemented secure authentication, role-based access control, and admin workflows across all platforms using Supabase Auth and BetterAuth, replacing spreadsheets, forms, and email-driven coordination

PROJECTS

PhishyURL | *React, TailwindCSS, TypeScript, FastAPI, Pandas, Matplotlib, scikit-learn, Python*

- Cleaned and normalized metadata from a UC Irvine dataset with **235,000+** instances, implementing pipeline-based preprocessing and outlier removal to improve data quality and minimize model bias
- Created Matplotlib visualizations to analyze feature relationships and key predictors of phishing behaviour
- Trained a custom **K-Nearest Neighbors** model and selected optimal features, tuned hyperparameters, and refined preprocessing steps with scikit-learn, resulting in a final classification accuracy of **99.91%** for phishing detection
- Developed a full-stack web application with React, TailwindCSS, and FastAPI to present predictions and visual insights from the trained model in a user-friendly interface

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Express, Node.js, FastAPI, TailwindCSS

Databases & Platforms: Supabase (PostgreSQL), MongoDB, Prisma

Developer Tools: Git, GitHub, Linux, Vercel, Render, Command Line
